ABSTRACT

This report describes and analyzes state support for higher education in fiscal year 1994. The report provides an analysis of funding trends nationwide; a national map showing percentages of 2-year gains for all states; a table showing appropriations amounts by state for the most recent 3 years as well as percentage changes; a table showing state tax appropriations per capita and per \$1,000 of personal income, along with national rankings; and individual state tables showing total state tax appropriations for higher education. The report reveals that after 2 especially negative years, support to higher education has turned around in a majority of the states. While the gains reported by states are not huge by comparison, they are impressive in the aggregate, with a near record total of \$40.8 billion appropriated to higher education by state governments. The trend in higher education support is not distinctly regional, although a greater proportion of southern states did somewhat better than did northern states. The most positive aspects of state support to higher education are the general levels of support in the 12 "megastates," with the exception of California, and levels of support for community colleges and for student financial aid. Preface

It is a sign of the times that what passes for "good news" in higher education these days is modest indeed. As Ed Hines notes, the national economy which began improving in 1993 and appears to be continuing on that path in 1994 produced \$1.3 billion in new state support for higher education. Whatever optimism these events may inspire must be quickly tempered, however, by the reality of increasing demands on higher education and continuing "structural" problems in state budgets. Not only are state expenditures in such areas as health care and criminal justice continuing their rapid rise, state tax policy in many cases is failing to capture even the modest economic growth which is occurring in the private sector.

The report which follows serves as the document of record on state support for higher education. We believe it is the most timely and thorough report on what might be termed "total state tax effort" currently available. But the reader is cautioned to look beyond the data here and to extend his or her assessment to other important factors affecting the total resources available to a state and its institutions. Many factors affect the financial health of public higher education, but two — enrollment trends and tuition increases — are especially relevant in the current environment. Many states, including some of those reporting the greatest declines in tax-based support, have allowed institutions to increase tuition significantly. In some cases, tuition increases have made up most, if not all, of the cutbacks in state appropriations. In other states, various pressures have contained tuition, leaving institutions to absorb the state cuts.

In order to fully understand the health of a public higher education institution or system, one also needs to know what has happened to enrollment. States with growing enrollment and declining appropriations are providing less per-student support than states with stable or declining enrollments. Several public higher education systems are capping enrollment, either directly or indirectly, in response to state cutbacks. Other systems, out of commitment to access or political pressure, are absorbing these additional students.

We urge readers to combine use of this data with other reports. Readers will find, for example, that Kent Halstead provides an analysis of a variety of factors affecting the total per-student support available in the public sector. His data also include a 15-year historical base. Halstead's report is published by Research Associates of Washington and entitled *State Profiles: Financing Public Higher Education*. For the most recent data on tuition, we recommend the annual report by the Washington Higher Education Coordinating Board entitled, *Tuition and Required Fees: A National Comparison*.

It is our hope that this report on state appropriations, combined with other national sources of data, will provide the latest information available for our readers. We welcome your comments and suggestions for improvement.

Executive Director

Acknowledgments

This publication relies upon a nationwide network of higher education and state government officials in the 50 states. These individuals report legislative appropriations for operating expenses of higher education which are published in monthly issues of *Grapevine*, published at the Center for Higher Education at Illinois State University, and summarized in an October issue of *The Chronicle of Higher Education*.

This book-length publication is the most complete and accurate compilation of these appropriations data which reflect total state tax effort for all of higher education. This report relies upon material furnished by individuals in the states, and their contributions are acknowledged with appreciation. Gwen B. Pruyn, managing editor of *Grapevine*, prepared the statistical tabulations and provided editorial assistance. Rusty Higham, doctoral candidate in Higher Educational Administration at Illinois State, devoted much of his assistantship to this effort. Rhonda Epper of the SHEEO staff provided an important final review of the publication.

The many contributions of the *Grapevine* Advisory Committee, whose names are listed below, are recognized with gratitude. This group meets annually as part of the State Higher Education Finance Officers' annual meeting. In 1993, this meeting was held in Denver, Colorado.

State Higher Education Appropriations: 1993-94

Overview

After two of the most negative years on record in state support of higher education, FY94 has been witness to a turnaround, if not some degree of restoration, in state support of higher education. Not since 1958, when these state tax appropriation statistics were first collected and published annually, has higher education encountered such a stringent financial period. Placing the events of the current year, FY94, into context by reviewing the past two years will show their effect on higher education nationally.

Downturn to the 1990s

As 1993 began, higher education faced mid-year rescissions in a majority of the states. These followed a year that saw a decline in constant dollars and the smallest of increases in current dollars. While observers noted the contrast between the lean years of 1992 and 1993 and the "prosperity" of the mid-1980s, actual records of state support in those years reveal a more modest picture. During the 10-year period beginning in 1981 through 1990, one-year percentage increases in state higher education support lagged behind inflation twice and were barely ahead of inflation six times. Only in 1985 and in 1986 were higher education one-year percentage gains more than two percentage points ahead of the cost of living, as measured by the Higher Education Price Index (Hines and Samuelson, 1991). In the transition from the 1980s to the 1990s, there were four consecutive years when gains in state higher education support were only slightly (two percentage points or less) ahead of the cost of living increases. Thus, higher education was not in a position of strength at the beginning of the last decade of the twentieth century.

Coupled with the above was the impact of what was termed a "fading federal contribution," the "most widespread set of budgetary imbalances that we have seen since the depths of the 1982 [national] recession," and "an ordinary and anticipated outcome of a cooling national economy" (Hinds, 1990). The trend of shrinking revenues combined with unyielding growth in state spending toward the end of the 1980s caused one expert to predict that "state and lo-

cal governments will experience considerable fiscal stress" (Gold, 1990). Frustratingly, the spending increases were not the result of better or more service, but rather of demographic, legal and institutional changes such as rapid increases in crime and delinquency together with the growing needs of an aging population.

As these fiscal issues were growing larger and potentially adverse in their effect on higher education, the academy was concerned about issues other than finance. In the 1990 *Campus Trends*, for instance, faculty shortages took center stage, although survey respondents believed that financial shortages did present a challenge to colleges and universities (El-Khawas, 1990). Shortly thereafter, the National Conference of State Legislatures predicted a "dismal outlook for 1991" (Snell, 1991). This became translated into inadequate or nonexistent amounts in states' budget-stabilization funds (known as rainy-day funds), into tax increases that were considered where possible, and into mid-year budget rescissions that became widespread across the nation. Interestingly, in FY91 the initial legislative appropriations to higher education were at a record level of \$40.8 billion nationally. However, by the time budget decisions were enacted, their effect was overwhelmingly negative, and the final amount appropriated nationally by state governments to higher education dipped to \$39.9 billion.

By 1992, higher education's fiscal woes had taken center stage. In a national survey by the American Council on Education, fiscal problems were the lead issue and were described as "serious and widespread" (El-Khawas, 1992). The range of problems was encompassing. Operating budgets were not keeping pace with inflation, tuition increases were precipitating hostile reaction by students and parents and in legislatures, summer sessions were being cut, extra course sessions were eliminated, faculty were being laid off, and maintenance and capital needs were being deferred.

Little wonder that *The Chronicle of Higher Education's* survey of the states identified belt tightening, efficiency measures, tuition increases, faculty productivity, academic accountability and cost containment as the issues of concern, especially in public institutions. Additionally, there were multiple criti-

cisms of higher education levied by academics, social commentators and reporters. They were found in books with titles such as *ProfScam, Impostors in the Temple* and *Killing the Spirit*. These continuing attacks on higher education by numerous insiders produced negative responses in the eyes of lawmakers and the public. One well-known spokesperson of higher education noted the following:

U.S. higher education has a mega-problem compounded of those specific problems and of its failure thus far to solve them, sometimes even to acknowledge them. Though the mega-problem may be framed in terms of image and reputation, I do not believe that its cure lies in the domain of public relations. Instead, its solution, if there is to be one, lies in setting right the underlying conditions — and, of course, in making the public aware that this is occurring (Finn, 1990, p. 1).

Higher Education's Response

As 1993 unfolded, the mood in and about higher education was not salutary. *The Chronicle of Higher Education* noted only certain spending categories were protected in the states, such as "debt service, welfare programs, corrections and primary and secondary education, but only a handful of states protected public-college spending" (Lively and Mercer, 1993, p. A29). The *10th Annual Campus Trends* survey by the American Council on Education, drawing on a sample of 406 administrators at 510 colleges and universities (responses were statistically weighted for representativeness), indicated that "difficult financial conditions persist" with "stagnant budgets in the public sector" and "budget constraints and uncertainties" in the private sector (El-Khawas, 1993, p. 3). Despite this, the views were less negative than those prevailing about the fiscal condition of higher education in 1991 and in 1992.

Higher education's most obvious response to financial realities was reducing budgets in order to "trim programs, rethink missions and operate more efficiently" (Lively, 1993a, p. A23). The response of colleges and universities to budget reductions, which largely took place in the 1980s, was to make percentage reductions usually in the 1%-to-3% range across the board, to defer maintenance, and to reduce or eliminate expenses such as faculty and staff travel. When the need continued for additional budget reductions, it became necessary to consider more fun-

damental strategies such as selected program eliminations, staff layoffs, and reallocation of resources to higher priority programs and needs. These efforts often involved reconsideration of institutional missions because colleges and universities could no longer "be all things to all people," meaning they could not continue to offer the broadest possible range of programs and opportunities. Rethinking mission statements involved "mission differentiation" whereby system officials attempted to emphasize the strongest programs at selected campuses and to encourage campuses to cooperate by reducing duplication and emphasizing individual strengths.

Nowhere has the budget crisis been more pronounced than in California. Protracted budget difficulties in California caused a 25% reduction in total state appropriation in the most recent two years. The scenario is not unfamiliar; it is comparable to the deep reductions in defense and the effects of the nationwide recession. What makes the situation especially difficult in California, however, is the demand for higher education by a population conditioned to believe in access and opportunity.

The fiscal stress is especially acute in the California State System which relies heavily on state support, much more so than the University of California System (Kantowitz and King, 1992). The depth of the fiscal difficulties in California has also resulted in monitoring practices and accusations that further complicate the situation. Three California senators, for example, established a telephone hotline to invite calls about "waste and abuse" in the University of California System (Lively, 1993b, p. A24). Accusations about an excessive compensation package paid to the university's top executive were widely circulated (Gordon, 1993). Accustomed to attending only in-state universities, students now look to and are recruited by universities in other states: "their exodus from a fragile system of colleges and universities that was once the crown jewel of American public higher education is yet another measure of how deeply three years of budget cuts have eroded the quality of life in California" (Gross, 1993, p. A1).

Continuing budget reductions also have changed the shape of higher education in other states. This has been especially true in the West. One newly-elected governor called for eliminating portions of the state higher education agency and merging three regional colleges with two universities (Lively, 1993c). In

Oregon, 70 academic programs were eliminated in the public colleges from 1991 to 1993, and the College of Education at Oregon State University was merged with another college (Lively, 1993d).

State higher education officers (often heads of coordinating boards) are caught between campus desire for autonomy and state lawmakers' calls for more accountability and oversight. These state higher education executive officers have always had "to walk a tightrope between responding to political leaders and advocating the broad needs of higher education" (Lively, 1993e, p. A28). Their constituent base is the campus, yet they may work for or answer to governors and legislators. Kenneth Ashworth has described well the potential conflict in their dual role of being accountable to the public at the same time they are spokespersons or even lobbyists for higher education (Lively, 1993e).

Increasingly, there are calls for higher education to combine cost containment measures with improved productivity and quality. In particular, areas with expanded administrative staffing are now subject to intense scrutiny, teaching loads are being reevaluated to refocus faculty time more on students and teaching activities, and quality is being stressed by increasing retention, improving graduation rates and being more oriented to the student as consumer (Elfin, 1992). In rethinking the purpose and function of higher education in the twenty-first century, DePalma has commented very appropriately: research universities will "shrink and become more specialized," faculty at campuses emphasizing teaching "will be handling more courses," and the "basic shape of the university" will be "transformed not in evolutionary ways but under the lid of a financial pressure cooker" (DePalma, 1993, p. A1).

Against the experience of the early 1990s, we can now turn to the somewhat more optimistic funding picture of state higher education support in FY94.

A Retrospective of Fiscal Year 1994

As shown in **Figure 1**, nearly \$40.8 billion has been appropriated to higher education in this initial round of state appropriations in FY94. This is the first time since FY91 that initial appropriations have reached this mark. In FY91, nearly \$40.9 billion was appropriated to higher education, but subsequent revisions reduced that final amount to \$39.9 billion. In FY92, \$40.1 billion and in FY93 \$39.5 billion were appropriated.

In addition to the record amount appropriated to higher education, there were 12 states that appropriated more than \$1 billion each to their higher education systems. In FY93, only 10 states were in this grouping. These "megastates" are discussed specifically later in this report.

In FY93, a record 17 states experienced a two-year percentage decline, with the same number of states experiencing a one-year percentage decline from the preceding year. As indicated in **Table 2**, that decline stopped in FY94 when 11 states experienced two-year percentage declines (five states declined only 1%) and eight states had one-year declines. In FY94, only Oregon had a double-digit one-year decline. There was a one-year decline of 9% in California; however, its two-year decline was 25%.

Current Trends in Gains

The percentage and dollar gains for the most recent 10 years are shown in **Table 1**. During the 1980s, there was a doubling in the total state higher education appropriations nationally. Had that rate of gain

N/C = not comparable

continued into the 1990s, there would have been more than \$50 billion appropriated to higher education in FY94. As it turned out, \$40.8 billion was appropriated by state governments to higher education in FY94.

During the generous years of the 1980s, higher education gained more than \$2 billion from one year to the next. During the lean years of the 1980s, the annual gain was less than \$2 billion, but it always was

more than \$1 billion, until the early 1990s. During the four years from FY90 through FY93, there was only a \$300 million (\$.3 billion) gain nationally for all of higher education with an actual \$600 million decline from FY92 to FY93 (Table 1). That translated into a 1.8% gain from FY90 to FY91, then a 0.6% percent gain from FY91 to FY92, followed by a decline of 1.9% into FY93. In FY94, there was a gain of 3.3% from FY93. In two-year percentage

Table 3
**Increasing, Identical and Decreasing Two-Year Percentage Gains,
 Compared to Preceding Year**

<i>Fiscal Year</i>	1988	1989	1990	1991	1992	1993	1994
Increasing	17	26	31	17	7	11	28
Decreasing	28	20	15	26	40	32	17
Identical	5	4	4	7	3	7	4

changes, there were similarly slower rates of gain after FY90 with a decline of 1.3% reported in FY93. In FY94, there was a two-year gain of 1.7% over FY92.

Data Revisions

Revisions in the initial legislative decisions are a relatively recent phenomenon in state government finance. Revisions occur because states cannot, by law, incur deficit spending, so state governments must pay close attention to actual as well as projected revenue flow during the fiscal year. Prior to the 1980s, a state (usually one in some fiscal difficulty) occasionally would make the initial legislative decision for higher education to be followed by a subsequent legislative decision to adjust the appropriation either upward or, more commonly, downward to achieve balance between appropriations and revenues.

During the 1980s, data revisions became increasingly common, approaching or even exceeding one-half of the states annually. At first, the revisions tended to be generally downward, but that has been changing. An equally common pattern now is for a state to be conservative in its initial legislative decision in order to remain within revenue projections, then make revisions to enhance an appropriation through a supplement.

We can use the period from the initial legislative decision for higher education in FY93 until the present time as an example. As reported to *Grapevine*, 15 of the 50 states made no change in their initial legislative decision. Thirty-five of the states revised their initial figure. Interestingly, of the 35 revisions, 17 were revisions upward. Not all revisions, therefore, involve reductions for higher education. In virtually

50% of the revisions, higher education received an increase.

“Megastates”

“Megastates” are a group of relatively highly populated, major industrialized states, each of which has a sizable system of higher education. For many years, 10 states comprised this category but that number increased to 12 early in 1991. Revisions downward that year caused Minnesota and Virginia to fall back to an appropriation of less than \$1 billion each. In FY94 there are again 12 states in this “megastate” category. As shown in **Table 4**, Minnesota has returned as a megastate but Virginia has not. Georgia became a megastate in FY94 when its higher education appropriation edged over the \$1 billion mark.

There are three groupings of megastates. California is in a category of its own simply because of the magnitude of its higher education system. In the initial appropriation in FY91, prior to a revision downward, California’s appropriation was over \$6 billion. In the next category are Texas and New York, each with a higher education appropriation of around \$3 billion. The third group has slightly less than \$2 billion each. Illinois heads this group with almost \$2 billion, followed by North Carolina and Florida at \$1.6 billion. Next are Michigan, Pennsylvania and Ohio at \$1.5 billion, New Jersey at \$1.2 billion and Georgia and Minnesota at just over \$1 billion.

In percentages of gain, the 12 megastates represent a varied picture. Georgia, Texas and North Carolina have double-digit two-year percentage gains with equally positive one-year percentage gains, although North Carolina had only a 6% one-year gain. Florida, New Jersey and Illinois have two-year gains of

Table 4
Changes in Dollars and Percentages for Megastates

Megastates	FY91-92	FY92-93	FY93-94	Percentages of Gain	
				1-Year	2-Year
California	\$5,831,201	\$4,824,479	\$4,384,452	-9%	-25%
Florida	1,443,318	1,461,341	1,576,041	8	9
Georgia	874,320	941,363	1,034,858	10	18
Illinois	1,711,076	1,730,982	1,806,826	4	6
Michigan	1,533,685	1,539,460	1,546,950	0	1
Minnesota	995,429	965,288	1,008,028	4	1
New Jersey	1,159,281	1,183,719	1,245,276	5	7
New York	2,895,561	2,774,114	2,947,227	6	2
North Carolina	1,445,790	1,541,926	1,630,179	6	13
Ohio	1,414,734	1,378,613	1,471,558	7	4
Pennsylvania	1,483,637	1,426,751	1,513,260	6	2
Texas	2,821,806	2,802,348	3,188,362	14	13
National Totals/Gain	\$40,100,696	\$39,483,268	\$40,775,516	3%	2%

9%, 7% and 6%, respectively, while Florida's one-year gain at 8% is almost double that of New Jersey and Illinois at 5% and 4% percent, respectively. Pennsylvania, Minnesota and Michigan have two-year gains of 1-2%. Pennsylvania and Minnesota have stronger one-year gains of 6% and 4%, respectively, while Michigan had none.

Of the 12 megastates, only California is in the negative category with a 25% decline over two years and a 9% decline over one year. Because of its size, the substantial effect of California cannot be ignored. Were California's percentage of decline excluded from the national total, the percentage of gain for the entire nation would have been a full percentage point higher, a record of more than \$41 billion appropriated by states to higher education this year.

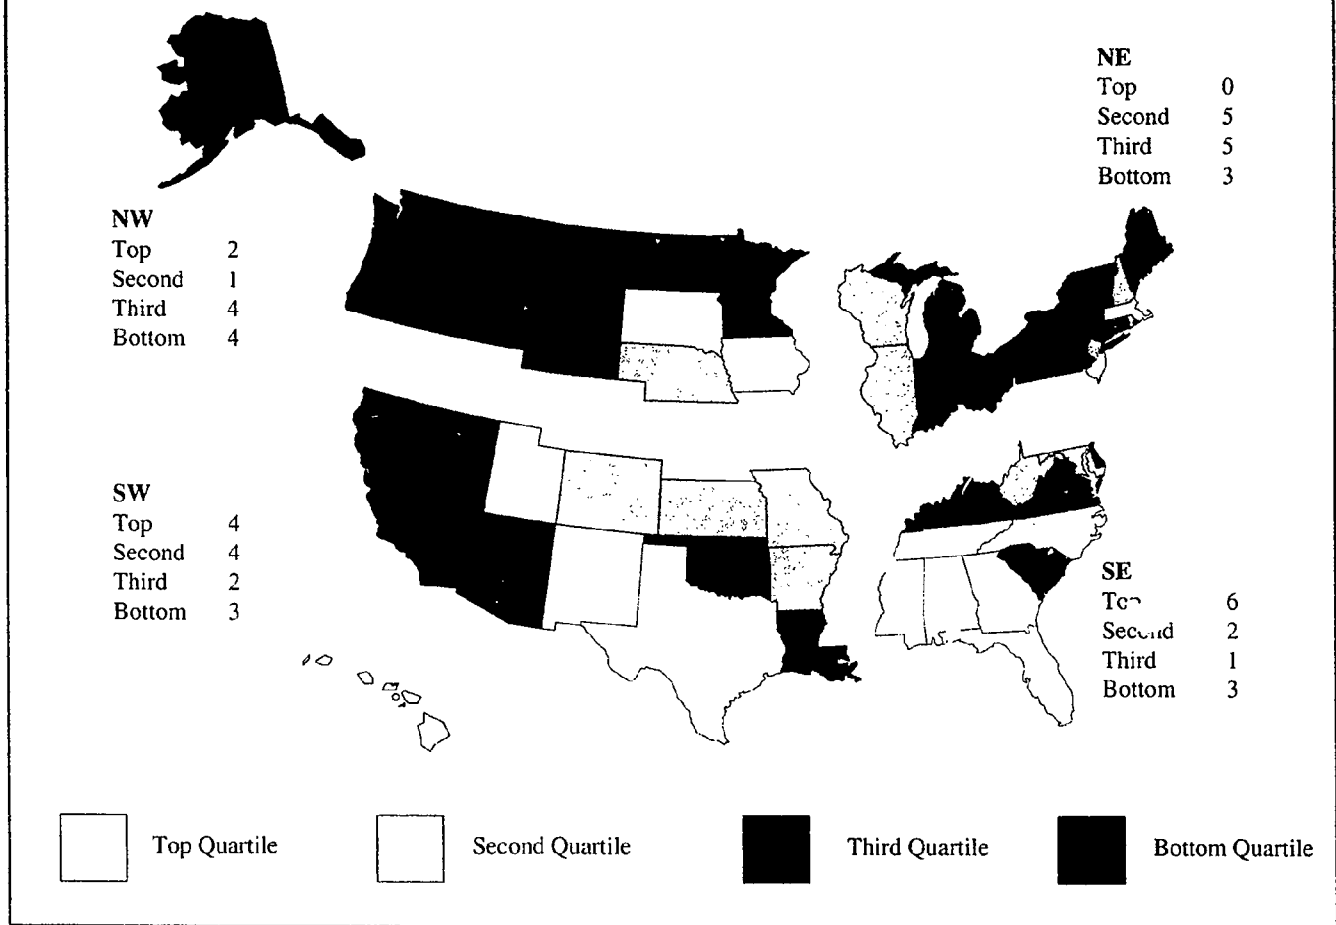

Regional Variations

One comparison that can be made between and among states is the extent of variation in state higher

education support by region of the country. **Figure 2** illustrates a four-quadrant division of the United States, using the northeast corner of Missouri as a center point and the Ohio River and southern border of Pennsylvania to divide Northeast from Southeast. There are 14 states in the Northeast, 12 in the Southeast, 11 including Alaska in the Northwest and 13 including Hawaii in the Southwest.

In Table 2, the 50 states are arranged in four quartiles, using a descending order of states on two-year percentages of gain, FY94 over FY92. The top quartile includes 12 states, going from Georgia and Tennessee at an 18% two-year gain down to Alabama, Florida and Hawaii at 9%. Arkansas and Wisconsin begin the second quartile with an 8% two-year gain, down to Nebraska, Maryland and West Virginia at 5% two-year gains. There are 12 states in this quartile. There are also 12 states in the third quartile, from Delaware, Ohio and Washington at 4% down to Michigan, Minnesota, Nevada and Wyoming at

Figure 2
 Quartile Map — Two-Year Changes

1%. The bottom quartile includes 14 states from Alaska and Maine at 0% change to 11 states with actual declines in higher education support in FY 94, compared to FY 92. This group of states in decline includes Connecticut, Kentucky, North Dakota, Oklahoma and Virginia at a 1% decline down to California at a 25% two-year decline.

One major feature of the regional pattern of the preceding two years was an East versus West pattern, with many states east of the Mississippi undergoing considerable fiscal stress and states west of the Mississippi River doing relatively better. However, this year there was a much more diverse, variegated pattern without obvious East-West divisions.

There are no Northeast states in the top quartile, but five of the 14 Northeast states made it into the sec-

ond quartile. In the Southeast, on the other hand, half of the 12 states were in the top quartile with another two in the second quartile. West of the Mississippi there are two Northwest states in the top quartile and another in the second quartile. Among the 13 Southwest states, four were in the top quartile and four in the second quartile. One might conclude that there is a moderate North-South split this year with states in the South having performed relatively stronger for higher education than states in the North.

Revenue Variations

The ability of states to support higher education is highly dependent on their capacity to raise revenue, to be willing to allocate amounts to areas identified in the state budget, and to make actual effort in the

support, in this case, of higher education. These are three critical variables in higher education support: revenue capacity, the willingness of legislators to make appropriations, and the effort expended for higher education. If these variables are of real importance, there will be clear differences between states in their ability to support higher education.

Using data collected and published by the National Conference of State Legislatures, each of these three variables is displayed in **Table 5**. A state's revenue capacity is defined operationally by the projected percentage increase in state government expenditures from the previous fiscal year to the current fiscal year, in this case from FY93 to FY94.

Table 5 displays the top nine and the bottom eight states in higher education support, as measured by

the percentage change from FY93 to FY94 using data provided by states to *Grapevine* as a measure of effort. Table 5 indicates that three of the nine top states were in the double-digit figures of 10% or greater gain in one year. One state gained 9%, three gained 8% each and two gained 7% each. The mean percentage gain of 9.4% in FY94 was higher than the mean percentage gain in FY93, but it was not as high as the mean percentage gain reported in FY92. Likewise, Table 5 shows those eight states having gained the least amount in percentage between FY93 and FY94 and, in fact, all eight of these states experienced an actual decline in higher education support from FY93 to FY94. The magnitude of the declines ranged from 1% in North Dakota to 12% in Oregon. Similarly, there were declines in the mean percentage changes in FY93 and FY92 with a slightly

Table 5

***Grapevine*

smaller decline reported in FY93 and a larger decline reported in FY92.

The nine top states in higher education support had revenue increases from the previous year that were twice the magnitude of those bottom eight states. The top states in higher education support had shown a mean percentage gain in revenue of 6% while the bottom states had a 3.4% revenue gain in that one year. None of the top states experienced double-digit increases, but four states reported percentage gains of 8% to over 9% (Georgia, New Mexico, Florida and Ohio).

But even beyond state revenue capacity is the variable of lawmaker willingness. Operationally, this is the percentage increase in total state appropriations from the previous to the current fiscal year. Table 5 demonstrates that the top states in higher education support are also those states that made substantial percentage gains in total state appropriations. In FY94, there was a mean percentage gain of 9.1%, which ranged from a gain of over 17% in New Hampshire, over 10% in Florida and in New Mexico, to a small gain of 3.4% in Connecticut. This 9.1% mean gain was greater than reported both in FY93 and in FY92, and it was substantially larger in size than the 1.7% mean percentage gain experienced by the states having declines in higher education support. In the eight states with decline, three states reported declines in total appropriations (California, Montana and Louisiana), and only South Carolina and Nevada reported percentage gains greater than 5%.

Table 5 shows quite clearly that the ability to support higher education is tied to a state's economic condition and to whether or not the state is able to move ahead in appropriations for public, social and educational services.

The link between higher education and a state's economy is of importance when one realizes that higher education makes specific contributions to the economy. Some states have experienced a successful demonstration of this link, with fiscal resources then being invested in higher education programs, research and demonstration projects.

Whether or not a state has adequate revenue capacity to support higher education is an important consideration, but lawmakers' willingness to support higher education is related to the level of demand for

major state services other than higher education. The five major areas of state government expenditure continue to be, in descending order of magnitude, elementary-secondary education, Medicaid, higher education, corrections and aid to families with dependent children. In fact, in 1993 for the first time state governments spent more for Medicaid and health care than they did for higher education, and in 1994 it is projected that states will spend 22% more on Medicaid than on higher education (Brownstein, 1993). Despite the fact that budgets for elementary-secondary education easily outpace the other four areas in magnitude, the percentage increases for public schools in recent years have been relatively low, yet the amount of funds can be sizable simply because of the large amount of state budgets devoted to elementary-secondary education. Of the five areas of major expenditure, higher education is viewed as discretionary and, as such, is subject to reductions more than the other areas.

Sector Variations

The purpose of the *Grapevine* data set is to provide information relative to levels of state support rather than more discrete elements, such as campuses and sectors. Over time, however, interest in *Grapevine* has prompted state higher education agency officials to provide the campus figures reported in *The Chronicle of Higher Education*. Some caution is always recommended in using these figures because they represent only a single revenue source, albeit a critical one especially for the public sector. Other revenue sources are also important, including student tuition, local taxes and other non-tax sources such as lotteries.

Nonetheless, we have tentatively examined the state higher education totals and compared these figures with two areas that have received above average support in recent years: state aid to community colleges and state support of student financial aid. There is a 2% gain in overall state higher education support in FY94 compared to FY92, and a 3% gain over one year from FY93. Those national figures are weighted, i.e., the national total is calculated by dividing the gain in dollars by the national aggregate total, as opposed to averaging the percentages of gain calculated for each of the 50 states. Because the nation, rather than states, is the unit of analysis, each state is treated in proportion to the size of its appropriation. The total dollar amount of appropriations

varies greatly from California's \$4.4 billion down to less than \$100 million each in New Hampshire and Vermont. This reflects demographics, however, and is not a statement about the priority given to higher education.

If the two-year percentages of gain in all 49 states (less Massachusetts which was non-comparable in FY94) are calculated arithmetically, there is a 4.1% two-year gain, not the weighted 2% figure. Using that unweighted 4% figure, we calculate that there is a 9.7% two-year gain for state aid to community colleges, and there is a 10.9% two-year gain for student financial aid. This indicates that states are giving a high priority to supporting community colleges and to supporting student financial aid.

With regard to community colleges, in 26 of the 39 states where a separate community college entry could be identified, the two-year percentage gain in community college support is greater than the percentage gain in higher education support generally. In nine states, there is a lower two-year percentage gain figure for community colleges than the states as a whole.

The figures for student financial aid are even more graphic. Student aid could be identified in 33 of the 50 states. In 24 of those 33 states, the two-year percentage of gain for student aid is greater than the two-year percentage gains for higher education generally. In only eight states is student aid support, as measured by two-year percentage gains, less than the two-year gain for higher education in general.

This would indicate that states are placing a high priority on providing funding to community colleges and to student aid. Community colleges garner strong local support and are oriented to training and providing skills of value to be used in the job market and to help the state's economy. Community colleges, therefore, may be viewed as a positive and tangible investment in improving a state's economy. Regarding student aid, with the strong and consistent increases in student tuition prices in recent years, it is relatively clear that states are viewing monetary support to student aid as an important offset to tuition increases. This issue has been covered well in

the media and in the literature, and states have responded by providing additional support.

While community colleges and student financial aid fared relatively well in FY94, state support for principal state universities — generally known as “flagship” campuses — did not do as well. These principal state universities were identified in all states except New York. (Massachusetts was omitted because of data noncomparability.) There was a 2.9% mean two-year gain for flagship institutions, which was somewhat less than the 4% mean two-year gain for all higher education appropriations in those 48 states. In 32 of the 48 states, the percentages of gain over two years for the principal state universities were less than the two-year gains for their respective states as a whole. In nine states, the two-year gains for the universities were larger than for their respective statewide gains and in the remaining states they were identical. Generally, the differences between the flagship gains and the statewide gains were small. The appropriations figures used for these state universities included only the campus operating budgets and did not include the colleges of medicine, agricultural programs or other specified purposes.

Conclusion

This description and analysis of state higher education support in FY94 shows that after two especially negative years, support to higher education has turned around in a majority of the states. While the gains reported by states this year are not huge by comparison, they are impressive in the aggregate with a near record total of \$40.8 billion appropriated to higher education by state governments. The trend in higher education support is not distinctly regional although a greater proportion of southern states did somewhat better than did northern states. The most positive aspects of state support to higher education are the general levels of support in the 12 megastates, with the exception of California, and levels of support for community colleges and for student financial aid.

State-by-State Appropriations

Nature of the Data

The individual state tables in this section reflect decisions made by legislatures in the 50 states about the amount of state taxes to be appropriated in FY94 for operating expenses of colleges and universities. State tax appropriations are a major source of revenue and are the focus of this report. Excluded are local taxes, federal funds and student tuition. These data sometimes are referred to as *total state tax effort* for higher education. Thus, funds are included if legislatures made appropriations to higher education using state taxes as the revenue source. These figures include not only campus operating funds, but also amounts for state scholarship programs, even if the funds go to students attending private or independent institutions; to private or independent colleges and universities if appropriated from state tax funds; to statewide coordinating and governing boards; and to state agencies as long as the funds are destined to be allocated to higher education. See the next section, "What the Figures Are Intended to Mean," which are the instructions sent to each state for the purpose of clarifying data collection and reporting.

Major Data Characteristics

These state tax appropriations data have fundamental characteristics which help define their nature and use. In states having community colleges funded by local taxes, rather than or in addition to state taxes, these data reflect only the state's share, not the local tax share or the share represented by student tuition. In the 1980s, the level of student tuition charged by public colleges and universities began to rise rapidly after decades of a typically low-tuition policy in

the public sector in most states. In fact, the rate of rising tuition levels in the public sector in the mid-to late-1980s outpaced the rate at which tuition increased at private colleges and universities. This caused considerable anxiety among students, parents and state lawmakers who became concerned about tuition increases, resulting in legislative hearings on student tuition at both state and federal levels.

Another fundamental characteristic is that these data represent appropriations and not expenditures. Appropriations data reflect legislative decisions and include revisions to the extent that revisions represent appropriations, rather than expenditures. Expenditures generally are made at the campus level after legislative appropriations. Expenditure data are used in the U.S. Government publication entitled *State Higher Education Profiles*. Expenditure data generally are not available until approximately three years after appropriations data are published.

After the initial legislative decisions are made for higher education, supplementary decisions may be made either by a legislature or by a governor. These later decisions are

termed *data revisions*, and, if reported by states to the *Grapevine* monthly research report, they are included in this publication. Two columns of data appear in each state table: one column reflects legislative decisions made in the previous year, and the other column contains legislative decisions in the current fiscal year. The designation of an "(R)," following the heading for fiscal year 1992-83, indicates that a revision was made in the initial legislative decision.

When states report these higher education appropriations to the *Grapevine* monthly research report, they include campus figures as well as amounts allocated

to agencies and organizations other than individual campuses. These agencies include statewide coordinating boards, also known as state higher education agencies, as well as governing boards for individual campuses or for systems of higher education, such as consolidated systems and multicampus systems. State tax funds which are allocated to state scholarship programs and agencies are included in these figures, regardless of whether the funds are disbursed to students attending public campuses or private institutions. These state tax dollars may be appropriated by the legislature to another state agency, such as the state treasurer or state health department, and may be designated for higher education for faculty and staff fringe benefits or funds for medical and health education.

These appropriations data also include sums destined for agricultural extension and for research. The keys in definition include whether or not funds are expended by colleges and universities as part of their campus operating budgets. Also considered is whether or not the students being educated are ranked at higher and postsecondary education levels for the purposes of enrollment, versus enrollment at other education levels such as a vocational-technical program which educates students at levels below the 13th grade.

In spite of all of these definitions, exclusions and caveats, it must be recognized that there are budgeting and accounting practices unique to some states and not others. Therefore, in reflecting total state tax effort, these data only begin to approach comparability. True comparability, such as deriving instructional expenditures per credit hour, are very dissimilar to these state tax appropriations data. These data, however, are timely because they are published as soon as possible after legislative decisions are made. These data are accurate because they include revisions, and they are comprehensive because they reflect the total amount of state taxes which are either appropriated or destined for the operations of colleges and universities.

What the Figures Are Intended to Mean

The ground rules used to achieve uniform reporting are enumerated below. Diversities of practices among the 50 states make it impossible to eliminate all inconsistencies and to accomplish absolute com-

parability among states and institutions. We emphasize that comparisons are useful only if the data are correctly interpreted.

1. Report only *appropriations*, not actual expenditures.
2. Report only sums appropriated for annual *operating expenses*.
3. For the state tax appropriations in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy, nursing and teaching hospitals, either lumped as one sum or set out separately as preferred.

4. *Include:*

- Sums appropriated for state aid to local public community colleges and for operation of state-supported community colleges, and for vocational-technical two-year colleges or institutes which are predominantly for high school graduates and adult students.
- Sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
- Sums appropriated for state scholarships or other student financial aid.
- Sums destined for higher education but appropriated to some other state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the state treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
- Appropriations directed to private institutions of higher education at all levels.

5. *Exclude:*

Appropriations for capital outlays and debt service.
Appropriations of sums derived from federal sources, student fees, auxiliary enterprises and other non-tax sources.

State Tables

ALABAMA

State tax-fund appropriations for the operating expenses of higher education for fiscal years 1992-93 and 1993-94 in Alabama (in thousands of dollars)
